

## CISC 3140: Lab 2

**Due 22 February**

**1) Application Name:** Gmail

**Description:** This is an email application developed by Google.

**2) Task 1:** To login into my account

- This allows you to access your email account's related information
- This task gives you entry into your account
- What can go wrong is that the user may forget my current password and may have to recreate it to achieve this task
- To achieve this task:
  - Go to [gmail.com](https://gmail.com)
  - Enter my email & password
  - Press "Enter"

**3) Task 2:** To check emails

- This enables you to look at your emails in your account
- This task helps you keep up with your email "news"
- What can go wrong is that the Internet/Wifi connection lagging will prevent me from checking emails
- To achieve this task:
  - Go to [gmail.com](https://gmail.com)
  - Enter my email & password
  - Press "Enter"
  - Click on bold emails and click on them

**4) Task 3:** To send emails

- This task allows you to "give" an email to another user
- This helps you transmit emails between you and another user
- What can go wrong is that the Internet/Wifi connection lagging will prevent me from sending emails
- To achieve this task:
  - Go to [gmail.com](https://gmail.com)
  - Enter my email & password
  - Press "Enter"
  - Click on "+ Compose"
  - In each field, type the respective email, message and the optional subject
